100% plastic free

from BIO granulate

The new ORGANIXtex protective cover is the perfect solution for future-oriented dry cleaners and laundries. Environmentally conscious customers will find a **green alternative** to the common plastic covers.

ORGANIXtex consists of **100% organic granulate** and can be processed on any packaging machine with impulse sealing technology.

100% protective

hygienic and durable

With ORGANIXtex your favourite clothes remain **100% hygienically packed**. Cleaned garments are optimally protected against moisture and dust, but also against physical contact, e.g. during transport.

Thanks to its air-permeable characteristics, the packaged clothes can even be stored for longer periods or when travelling.

100% compostable

in home compost

Other than so-called bio-plastics, which are often found on the market, the ORGANIXtex material is not only biodegradable, but also **completely home compostable.**

This means that no energy-intensive rotting processes are necessary in the recycling plant – ORGANIXtex naturally weathers in the domestic compost.

ORGANIX 630 KST/KW

MAXIMUM FLEXIBILITY

- > *no heating time, ready for immediate use*
- > *infinitely variable sealing time interval*
- > *acoustic sealing time indicator*
(can be switched off)
- > *especially suitable for ORGANIXtex*
protective cover

FLEXIBLE USE.

The stand system **ORGANIX 630 KST** and the wall-mounted system **ORGANIX 630 KW** are our basic models for the individual and hygienic wrapping of hanging clothing. Of course both models are perfectly tailored to the new ORGANIXtex protective cover.

The length of the packaging can exactly be adjusted to the respective garment. Packaging that is too long or too short is now a thing of the past. The packaging falls loosely over the wrapped clothes and ensures optimum air circulation. Thanks to the air-permeable characteristics of ORGANIXtex, clothes can be stored even longer in the packaging.

EASY HANDLING.

During the development we particularly focused on a user-friendly operation – even when the machine is in constant use or during high workloads. After pushing the lever the machine will hold the sealing pressure until the end of the packaging process. The sealing results are completely uninfluenced by the operator and therefore always perfect.
