100%
plastic free

100%
protective

100%
compostable

Our perfect solution for future-oriented hospitals and care facilities:

> **100 pieces per pack**

> **folded 950 x 3,500 mm** (W x L)
after unfolding 1,900 x 3,500 mm (W x L)

> **Material strength: 0.013 mm**

100% plastic free

The new ORGANIXprotect B bed cover is the first **100% plastic free and carbon neutral** alternative to common bed covers made of polyethylene. The material is made entirely from sustainable raw materials, which are not sourced from food.

Did you know? A bed cover consists of approx. 6 square meters of plastic foil. If a hospital bed is reprocessed only 50 times per year, that is 300 sqm of plastic foil per year and bed.

Ready to change?

100% protective

ORGANIXprotect B bed covers guarantee **professional and hygienic storage** of the furniture after reprocessing. Thanks to its air-permeable characteristics, the covered beds can even be stored for longer periods.

For a **convenient and safe handling**, we deliver our bed covers prefabricated and folded in a box of 100 pieces.

100% compostable

Other than so-called bio-plastics, which are often found on the market, the ORGANIXprotect material is not only biodegradable, but also **completely compostable.**

Alternatively, the material is suitable for recycling and new ORGANIX material is produced from the granules thus obtained. ORGANIX-protect consequently meets all the expectations that are legitimately expected of **future-proof sustainable packaging.**

Responsibility

One of our natural resources.
